Recommandation

What happened: The incident involves service svc-mobile-98765, order ord-[PHONE_REDACTED], and customer 5575-GNVDE. The order remains in an acknowledged state for 45 minutes, and provisioning is impossible. The relevant logs indicate a timeout during the interaction with the CRM, and the CRM adapter is unable to retrieve the customer profile. The order is blocked in the 'acknowledged' state due to this issue. No similar tickets have been found in the historical data.

Why: The logs log-003, log-004, and log-005 show a timeout error when interacting with the CRM, specifically a 504 5575-GNVDE error. Log-004 also mentions that the order ord-[PHONE_REDACTED] is blocked in the 'acknowledged' state because the customer profile cannot be retrieved from the CRM. This information converges to suggest a communication problem between the CRM and the TMF622 adapter. The context of the customer, order, and logs all point towards this issue.

Recommendation: The team should investigate the communication between the CRM and the TMF622 adapter. Verify the connectivity and health of both systems. Additionally, check if there are any known issues or maintenance activities affecting the CRM or the TMF622 adapter. If the problem persists, consider reaching out to the CRM support team for further assistance.
